Titanium 30 mm

BONE MORSELIZER

The Bone Morselizer is a hand instrument which helps in the crushing of bone material. Follow these steps to prepare properly crushed bone:

2. Place the bone material into the bone well.

3. Compress handles together in order to create pressure on the bone material.

4. Turn the bone morselizer clockwise as the handles are squeezed. Always maintain a slight space between the two knurled surface, by using the spacing screw.

5. To remove bone, press the T-handle and bone will express from the bone well.

SS-28501
Technical Datas:

Intercondylar Distance	120 mm.
Condylar inclination-fixed at	fixed at 30°
Bennet angle-fixed at	fixed at 7°

Incisal table inclination	10
Distance between mounting plates	85 mm.

Weight	400 gr
Opening	125°

Features:

Lightweight anathomic articulator made of aluminum die-casting. It can be used following the geometrical laws of medium values (Bonwill Triangle).
 Fixing according to centric.
 Automatic return to the hinge axis with springs.
 Perfect stability also in reversed position.
 Easy access and visibility to the lingual surfaces.
 Interchangeable self lingual surfaces.
 centring aluminum mounting plates

SS-28502
Technical Datas:

Intercondylar Distance	120 mm.
Condylar inclination-fixed at	fixed at 30°
Bennet angle-fixed at	fixed at 7°

Incisal table inclination	flat
Distance between mounting plates	110 mm.

Weight	700 gr
Opening	185°

Special Features:

Adjustable back by registration screw to work without incisalrod by keeping constant trajectories and inclinations during side and back/forward movement.
 Puretranslation movement (key and instructions included)
 Anti-shock hinge rod in case articulator falls down.
 Bigger size lock screws for mounting plates.
